Evolução do software da *internet*

Pergunta 1

The open nature of the world wide web means innovation happens at a rapid pace and frequent conversations regarding net neutrality will continue for some time. Will we be browsing the web with VR headsets on in a few years? Will our World Wide Web need to reach out to other planets? We shall see!

2019
30 years and still evolving

Some early attempts to put the internet on your phone gave us WAP sites, but it was 2007's launch of the iPhone which truly made the web mobile. It was this innovation that slowly made the responsive web site the only sensible approach to designing web pages.

2007
The web goes mobile

2002 saw the launch of some social networks you may remember, MySpace, Friendster and everyone's favourite; LinkedIn. This social media emergence mirrored the increasing ubiquity of internet access in the home. Have you heard of Facebook? That launched just after in 2004.

2002
Social media

The dot com boom from 1995-2000 saw millions made (and subsequently lost) as investors poured money into unstable start ups in the hopes of huge returns. Of course those investors that backed the likes of Google, Amazon and eBay are pretty happy with their decision.

1995
The dot com boom

Building upon the steady growth, 1995 saw the first signs of CSS and JavaScript, helping to evolve web pages from static documents to the start of the rich media experience we have grown so accustomed to today.

1995
Incorporating CSS and JavaScript

Over the next few years the main technologies of the World Wide Web were developed along with the first browser, also called the World Wide Web and the idea was shown to the world. Tim Berners Lee described it in 1991.

1992
The first browsers

The WWW project was started to allow high energy physicists to share data, news, and documentation. We are very interested in spreading the web to other areas, and having gateway servers for other data.

1991
Welcome to the World Wide Web

The idea of a computer networking spanning the globe had appeared in science fiction for decades. But it was frustrations at CERN over sharing data that saw Tim Berners Lee, in 1989, turn his attention to sharing data from a multitude of different systems.

1989
Data sharing at CERN

Whilst formulating this new system it quickly became apparent just how far reaching the idea could be. From scientific circles to the spread to other academic disciplines and then (eventually) into the home.

DEMOCRATIC CONVENTION LIVE

Clinton says Democrats hold keys to bright future

Saying the Democratic Party holds the keys to "progress and prosperity," President Clinton made the case for the election of his protege, Vice President Al Gore, in an emotional address to the party convention Monday night.

"Are we going to keep this progress and prosperity going? Yes we are," Clinton told convention delegates, who cheered at length and chanted as he began the night's major address.

Abstract

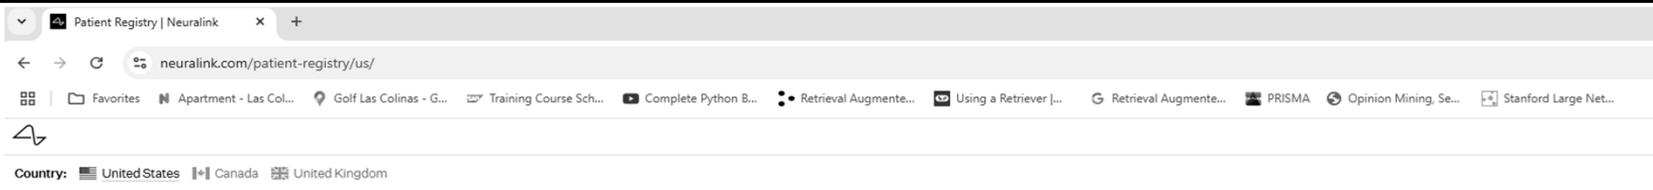

Considering the recent increase of interest in the transmission of olfactory information, based on an inkjet printer mechanism, which emits scent emissions of scents. By using pulse emission, the authors achieved human inspiration. Such synchronization is important because humans can detect and identify odors. By using pulse emission, the authors achieved human inspiration. Such synchronization is important because humans can detect and identify odors. By using pulse emission, the authors achieved human inspiration. Such synchronization is important because humans can detect and identify odors.

Background

Research on the transmission of olfactory information together with audio developing Sensorama, the first Virtual Reality (VR) system presenting olfactory information, was developed by Tominaga *et al.* (2001), provides users with an immersive environment, where the aroma is defined as the area in which a scent is present. Kaye (2004) describes several systems that add scents to Web content, and Osmozor (2011) are utilized in these systems. Another type of display

Resumo

A Internet não é sinónimo de WWW e tal como a Internet, a WWW teve vários estádios ao longo do tempo.

Cada uma das fases da Web ainda podem coexistir nos dias de hoje, pelo que as fases não são mutuamente exclusivas.

Cada fase proporciona capacidades de implementar e potenciar negócios, bem como o seu desenvolvimento, entendimento e complexidade.
